

Burndown Chart

As reviewed in the Schedule doc, we did almost all the tasks that does not depends on BRUT-2 in the first week of the sprint, and things went smoothly – we even exceeded the expected speed for a day. However, we spent much time in week 2 waiting for BRUT-2 to be finished, so there were a few days where nothing was burnt down, and the speed evened out. After that, we managed to complete another few tasks before the sprint ends.

The speed of the team is almost the same as what we had at the end of the last sprint, though in sprint 2 we did everything in the second week, so technically we are slower than we were. We purposefully chose some of the more difficult stories (search, profile, newsreel, etc.) to do, and we would have done better if we did not overlook the complexity of BRUT-2.
